

2. Float to Integer

```
#include <stdio.h>
int main(){
    float a=10.5;
    int b=(int)a;
    printf("float value = %.1f\n",a);
    printf("integer value = %d\n",b);
    return 0;
}
```

Output:

A screenshot of a terminal window with a dark background. The title bar at the top says "Output". The terminal displays two lines of text: "float value = 10.5" and "integer value = 10".

```
Output
float value = 10.5
integer value = 10
```
